

## NK-9® Frequently Asked Questions

### 1. What is NK-9?

NK-9 contains the ingredient AHCC (Active Hexose Correlated Compound), an extract from a hybridized mushroom. NK-9 is recommended to support the immune system and sustain long term health for both dogs and cats.

Clinically tested, NK-9's active ingredient supports the immune system by maintaining "Natural Killer Cell" (NK) function.

### 2. What are Natural Killer (NK) cells?

Natural Killer (NK) cells were identified by scientists in the 1980's as the key or most important white blood cell on the front line of defense in the immune system. Natural Killer (NK) cells patrol the body, killing and destroying all "non-self" cells or any cells that don't belong in a pet's body.

### 3. How quickly does NK-9 work?

Research has shown that in as little as 3 hours, NK cell activity can triple. However, this is dependent on the initial state of the pet's immune system.

### 4. What is the NK-9 suggested daily use?

NK-9 usage is based on a pet's weight with ½ administered in the morning and ½ administered in the evening.

Weight	Total Usage First 7 Days	Total Daily Usage After 7 Days Maintenance
30 lbs or less	1 Capsule	½ Capsule
31-60 lbs	2 Capsules	1 Capsule
61-90 lbs	4 Capsules	2 Capsules
91-120 lbs	6 Capsules	3 Capsules
120-150 lbs	8 Capsules	4 Capsules

Caution: A veterinarian examination is recommended prior to using product. Safe use in pregnant animals has not been proven. If animal's condition worsens or does not improve discontinue use and consult veterinarian or manufacturer.
